

Through PROGRESS farmers feed more people

- **Increased productivity over the past 70 years allows more food to be produced on less land.**
- **Corn yield went from 38 to 150 bushels per acre.**
- **Soybeans increased 2.6 times to over 43 bushels per acre.**
- **Wheat yields are over 3 times higher at 70 bushels per acre.**
- **In 1940 one acre of wheat fed 21.5 people for one year, in 2010 one acre fed 70 people for one year.**
