29-30 OCTOBER 2024

Sarova Panafric Hotel, Nairobi, Kenya

BACKGROUND AND OBJECTIVES

During the past three years, a consortium of Michigan State University, Tegemeo Institute of Agricultural Policy and Development, Egerton University and Purdue University has been implementing the Support for Applied Research and Analysis in the Kenya and East Africa Region (SARA-KEA) project, funded by the USAID through a grant from USDA. The project's objective is to provide applied research and analytical support to 1) strengthen knowledge management, adaptive learning, and data-driven decision making to guide ongoing and future USG investments in the KEA region, 2) improve development outcomes through increasing economic growth, food security, better nutrition, and enhanced resilience to shocks, and 3) contribute to research and institutional capacity development that will enhance the ability of local organizations and researchers to conduct high-quality research and influence development programs/policies more effectively while becoming increasingly self-reliant.

The project's research focus builds upon three thematic areas of agriculture-led growth, resilience and nutrition, and encompass support functions around analytics, learning and adaptive management and knowledge management. Since its inception, the analytics agenda for the project have been identified through a consultative (co-creation) process to ensure relevance and ownership of the research evidence for local development and policy decisions. The consortium has utilized a range of methodologies to collect, analyze, and synthesize data and develop findings, which the consortium has shared with USAID and other stakeholders to inform/support development programming.

Considering the localization initiatives of USAID, the consortium has organized this two-day national conference to engage a broader array of stakeholders and decisions makers in Kenya to share and discuss the research findings with a view to inform policy, development and research in the country. The objectives of the conference are to: 1) present the results of the research and analytics undertaken in the project and other research activities by the consortium members and gather feedback, and 2) facilitate a dialogue among diverse participants and provide a forum for exchange of ideas and perspectives among a wide range of stakeholders in Kenya's agricultural sector, including policymakers, development practitioners, private sector and researchers/analysts. Participants include government officials, civil society organizations, donors, the private sector, and research organizations.

29-30 OCTOBER 2024
