Large crabgrass

Digitaria sanguinalis (L.) Scop.

Life cycle: Prostrate to ascending summer annual.

Leaves: Both leaf surfaces and sheath are densely hairy. Leaves are rolled in the bud and more numerous at the base. Leaves are generally shorter, wider and more tapered than those of most other grasses.

Ligule: Jagged, membranous ligule.

Stems: Prostrate to ascending stems may reach 3 feet tall, capable of rooting at the nodes. Mature stems are often compressed in cross-section.

Flowers and fruit:

The seedhead is a terminal panicle that consists of a few to several slender, fingerlike branches arranged in a whorl. Each plant is capable of producing thousands of yellowish brown, narrow oval to lance-shaped seeds.

Large crabgrass collar region.

Reproduction: Seeds.

Large crabgrass seedling.
