Manganese deficiency

Tom Zabadal , MSU Horticulture

[Home](#) > [Scouting guide](#)> manganese deficiency

Manganese deficiency occurs frequently in grapevines but seldom causes economic harm. Symptoms occur on basal, often shaded leaves. The yellowing pattern between the veins occurs as "islands" of yellow areas rather than a continuous discoloration of the leaf. The leaves maintain a normal size and shape.

Additional information

- Sampling information from [MSU Soil and Plant Nutrient Laboratory](#)

Manganese deficiency showing the characteristic "islanding" pattern. This symptom often occurs on basal shaded leaves.
